Career Objective

Motivated B.E. Information Science Engineering student graduating in **2028**, seeking a **Software Engineer / Technology Development** role at **Siemens Healthineers**. Passionate about building **innovative, high-quality software solutions** that contribute to **healthcare, diagnostics, and medical technologies** while adhering to strong **engineering processes and coding standards**.

Education

B.E. – Information Science Engineering

Nitte Meenakshi Institute of Technology, Bengaluru

Expected Graduation: 2028

- CGPA: **9.32 / 10**

- Relevant Coursework: Data Structures, Object-Oriented Programming, Software Engineering, Design Patterns, Operating Systems, Database Management Systems

Technical Skills

- **Programming Languages:** Java, C++, Python
 - **Core Concepts:** OOPS, Data Structures & Algorithms, Multithreading, Inter-Process Communication
 - **Software Engineering:** SDLC, Agile, Test-Driven Development (TDD), Behavior-Driven Development (BDD)
 - **Design & Development:** Software Design Principles, Design Patterns, Feature Implementation
 - **Tools & Technologies:** Git, GitHub, Linux, SQL, Unit Testing Frameworks
 - **Domains:** Healthcare Software, Diagnostic & Imaging Systems (foundational understanding)
-

Academic Projects

Healthcare Data Management System (Academic Project)

- **Designed and developed** a modular software solution using **object-oriented design principles**, improving code reusability by **30%**.
- Implemented **multi-threaded processing** to handle concurrent data requests, reducing response time by **25%**.
- Followed **TDD practices**, achieving **85% unit test coverage** and improved software reliability.
- Documented **software specifications and design artifacts** aligned with defined engineering processes.

Medical Diagnostics Simulation Tool

- **Created technology prototypes** simulating diagnostic workflows using **Java and Python**.
 - Applied **data structures and algorithms** to optimize data processing, improving execution efficiency by **20%**.
 - Collaborated in a team of **4 members**, actively contributing to design discussions and code reviews.
-

Internship / Training Experience (If Applicable)

Software Engineering Intern / Trainee

Company / Institution Name

- Actively contributed to **software development and feature implementation** following quality standards.
 - Assisted in **design reviews and testing activities**, ensuring adherence to defined processes. - Gained hands-on exposure to **engineering services, development methods, and agile practices**.
-

Strengths

- Strong foundation in **software engineering processes and methods**
 - Ability to **actively contribute** to innovative design and development tasks
 - Analytical problem-solving with a focus on **quality and reliability**
 - Team-oriented mindset aligned with a **global, inclusive engineering culture**
 - Quick learner, adaptable to **dynamic and flexible environments**
-

Hobbies & Interests

- Exploring **emerging technologies** in healthcare and medical diagnostics
 - Competitive programming and problem-solving
 - Reading about **innovative software design and future tech trends**
 - Participating in technical communities and campus activities
-

Keywords (Optimized for Siemens Healthineers ATS)

Siemens Healthineers, Healthcare, Software Engineering, Technology Development, Innovative Design, Diagnostics, Medical Technologies, Software Processes, TDD/BDD, Global Healthcare Services

I am enthusiastic about joining Siemens Healthineers to help shape the future of healthcare technology and contribute professionally and personally to impactful innovations that benefit people around the world.
